

Ahmed Ehab El-Badry Flutter Developer

ahmedhobaa24@gmail.com • +20 1011669134 • cairo, Egypt • github.com/ahmedEhab10 • linkedin.com/in/ahmed-ehab-63389730a

Flutter Developer with hands-on experience in mobile application development, cross-platform development, Android and iOS apps using Flutter, Dart, Bloc, MVVM, and Firebase. Strong background in consuming RESTful APIs, clean architecture, and responsive UI design. Experienced in integrating real-time databases, authentication, and third-party APIs. Passionate about writing clean, maintainable code and delivering production-ready applications.

EDUCATION

Bachelor of Computer Science, The Egyptian E-Learning University (EELU) 09/2021 – 07/2025 | Sohag, Egypt

SKILLS

Programming Languages Java, Dart, Python, C++	Mobile & Cross-Platform Development Flutter, Firebase, REST APIs, Dio, Retrofit, Hive	Architecture & Software Design Clean Architecture, MVVM, SOLID Principles, OOP, Design Patterns (Factory, Singleton, Observer, etc.)	State Management Bloc, Provider, Cubit
Tools & Platforms Git, GitHub, Android Studio, VS Code	Additional Technical Skills Responsive UI Design, JSON Parsing, Google Maps API, Localization ,Dark/Light Mode,		

CERTIFICATIONS & COURSES

Complete Flutter & Dart Development, Udemy (Eng. Tharwat Samy)	Mastering Flutter: Responsive & Adaptive UI Design, Udemy (Eng. Tharwat Samy)	Flutter Advanced: Bloc and MVVM, Udemy (Eng. Tharwat Samy)
Flutter & Firebase: Build Your Own E-Commerce App, Udemy (Eng. Tharwat Samy)	Flutter Development Diploma, Route IT Training Center (5 Months)	

PROJECTS

Health & Lifestyle AI Assistant (Graduation Project),
A Flutter-based application powered by AI to assess users' physical conditions and offer customized workout and nutrition plans.

- Built using Flutter and Firebase
- Integrated AI model for personalized fitness recommendations
- Includes user authentication, profile management, and progress tracking
- Used state management via flutter_bloc and clean architecture principles
- Repo: <https://github.com/ahmedEhab10/FitApp>

Evently App, *Event sharing and location-based mobile application. Flutter - MVVM - Firebase - Google Maps*

- Built with Flutter & MVVM architecture
- Firebase Authentication & Firestore for real-time data
- Google Maps API for event location & navigation
- Localization (EN/AR) + Light/Dark mode
- Real-time updates and interactive UI
- Repo: https://github.com/ahmedEhab10/Evently_App

Movies App, *Flutter - Clean Architecture - Real APIs*

- Production-ready movies application using multiple real APIs.
- Multi-API integration with token-based authentication
- Clean Architecture + Cubit state management
- Live data consumption, smooth animations & modern UI
- Scalable structure with proper error handling
- Repo: https://github.com/ahmedEhab10/Movies_app

Hobix Tracker, *A Flutter-based offline-first fitness tracking application for workout scheduling, progress tracking, and body measurements.*

- Built with Flutter using Clean Architecture and BLoC/Cubit for scalable state management
- Integrated Hive local database for fully offline workout, schedule, and progress storage
- Features include workout planning, exercise history, body stats tracking, and personalized onboarding
- Applied GetIt for dependency injection and responsive UI design for a smooth user experience
- Repo: https://github.com/ahmedEhab10/gym_tracker

Bookly App, *A Flutter-based book browsing app using a public API*

- Fetched and displayed books data using Dio with an external API
- Implemented clean and responsive UI with PageView, ListView and elegant transitions
- Applied Bloc pattern for state management
- Used cached_network_image for efficient image loading
- Followed clean architecture best practices

E-Commerce App, *A complete Flutter app supporting product listing, cart, and checkout functionalities.*

- Integrated RESTful APIs using Dio
- Applied MVVM and Provider for scalable architecture
- Emphasis on clean UI and responsive layouts
- Repo: <https://github.com/ahmedEhab10/ecommerce-app>
